

Vector Rapid Wash™ is a car wash operator's dream: minimum on-site management with maximum profitability. As Belanger's premier in-bay, touch-free automatic car wash system, the Vector is unparalleled in its appearance, performance and investment opportunity. For more than 30 years, Belanger has listened to its customers, engineered the most innovative systems, and created an unbeatable service network. Simply put, we've got you covered.

The minimum space requirement for the Vector system is a 25' l x 14' w bay area. Of course, we can review your site plan to determine possible options available.

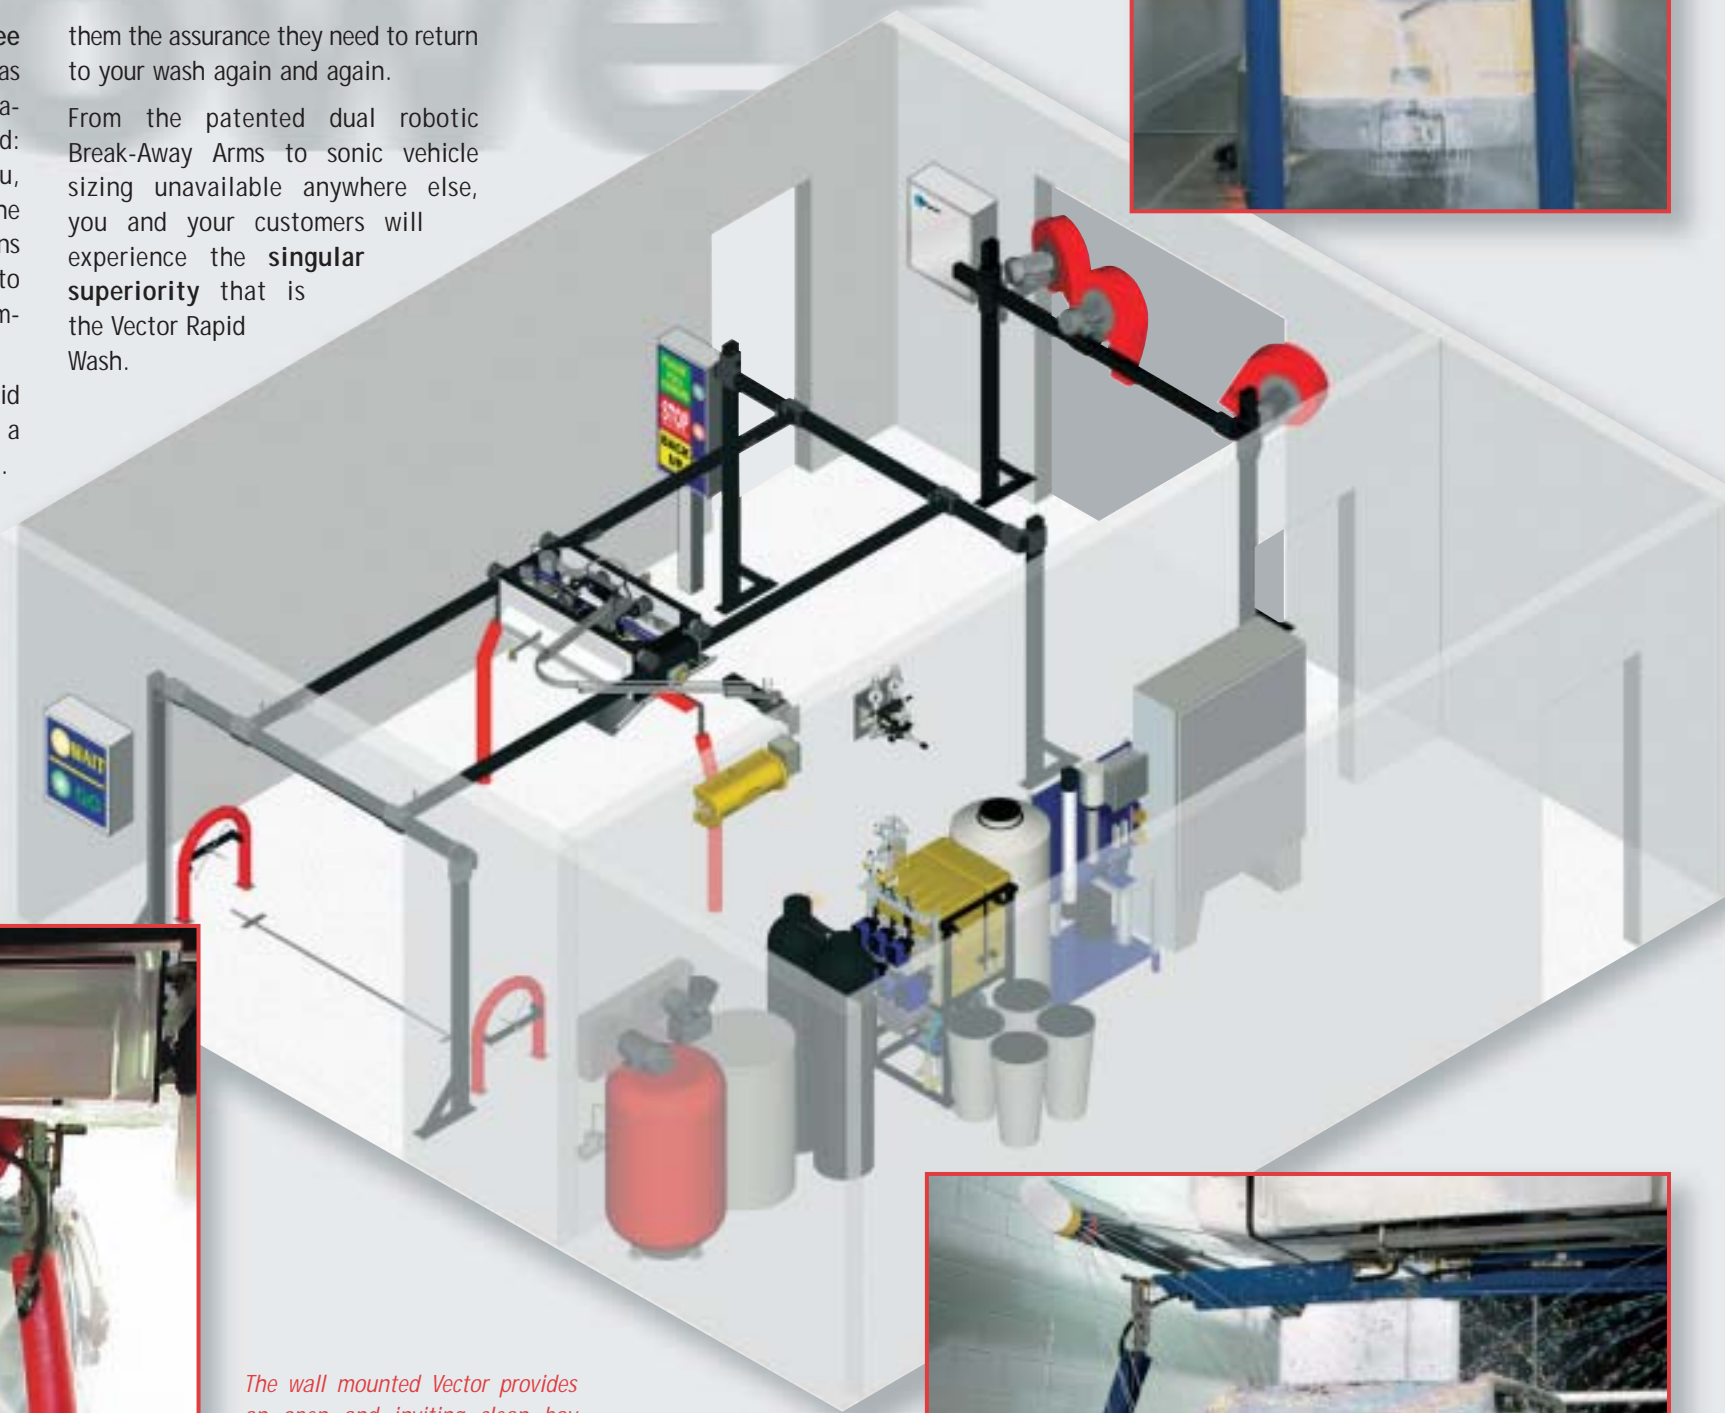

As an attendant-free, swivel-free system, the Vector Rapid Wash has been engineered with car wash operators and their customers in mind: **unlimited profit potential** for you, **great service** for them. In the Belanger tradition, several innovations were developed along the way to enhance the Vector's overall performance and profit potential.

When you purchase the Vector Rapid Wash system, you can count on a sustained return on your investment. With the capability to wash 15 to 24 cars an hour, you'll maximize the volume of customers at your site, while providing ultimate convenience in return.

The Vector is **faster** than any other in-bay touch-free wash system. Your customers will feel **comfortable and confident** in operating the wash easily, giving

them the assurance they need to return to your wash again and again.

From the patented dual robotic Break-Away Arms to sonic vehicle sizing unavailable anywhere else, you and your customers will experience the **singular superiority** that is the Vector Rapid Wash.

The wall mounted Vector provides an open and inviting clean bay appearance. Also available is a floor mount option.

singular
superiority

The Vector is 100% soft start and stop for high-speed movement with no equipment shock, which means less wear and tear over time.

When a vehicle enters the bay, it activates the forward and rear sensing system, which tells the driver whether to pull forward, backup or stop.

Patent-pending sonic sensors pinpoint the vehicle dimensions (length and width) and calculate the cleaning distance from the vehicle.

The patented Break-Away Arms gently glide around a vehicle allowing **simultaneous chemical application, non-stop cornering, and in cycle speed changes** to make Vector faster than competitor products. In case of a fault condition, they can easily be repositioned and reset in a matter of minutes.

With Vector's E-300, the operator has **unparalleled program versatility**. Operators can easily toggle between up to eight different wash packages in a matter of minutes, allowing **maximum flexibility** and ability to accommodate weather changes and customer needs in real time.

The Vector has been engineered to give you **the most consistent chemical application with practically no waste**—our unique on line air purge keeps chemicals on the car and not on the floor—ensuring unprecedented cleaning performance. Less waste means **reduced operational costs** and **increased profitability** for you.

Triple foam is a standard feature. The Vector XR™ option (shown at left) provides an even more impressive triple foam application and an additional opportunity to generate extra revenue.

support

Belanger's comprehensive service and support give you peace of mind. We stand behind our equipment and provide the most responsive service groups available.

Our Value Added Resellers make up a network of factory trained and certified installers and service technicians. They are on hand and are ready at any time to respond to your needs, including:

- Installation
- Permitting Assistance
- Layout, Economic Modeling and Financing Assistance
- Operator Training
- Marketing Support
- Scheduled Maintenance and Emergency Service
- Imaging and Signage
